

The AAR is making it easy for members to purchase [Renewable Energy Credits](#) when traveling to the Annual Meeting. By simply clicking a box during the [registration process](#), members can choose to give \$15 to *Native Energy*.

The AAR's Sustainability Task Force selected *NativeEnergy* because of its commitment to reducing greenhouse gases while supporting its sustainability projects.

*Native Energy* helps assist Native American, farmer-owned, community-based renewable energy projects that create social, economic, and environmental benefits. These projects displace electricity from fossil fuels and reduce other greenhouse gas emissions.

The AAR and SBL are pleased to have collected a total of \$7,560 from 504 participants in this carbon offset program. Along with a \$500 donation for the AAR's and SBL's staff travel, we sent *NativeEnergy* a check in the amount of \$8,060. These funds were split between two projects. To learn more about *NativeEnergy*, visit [www.nativeenergy.com](http://www.nativeenergy.com).

One project is dedicated to the development of [The Indiana School Wind Project](#), in which three school districts in Northern Indiana are using wind power to save money and teach students about this important natural resource.

*Native*

*Energy* has installed wind turbines that power school buildings and provide hands-on renewable energy training for young people. Every dollar the schools save on energy costs is a dollar they can spend in the classroom.

The second project is [The Kenya Clean Water Project](#). In rural Kenya, waterborne illness is a leading cause of death for young children, and untreated water is dangerous to people of all ages. Wood is used to boil water in Kenya, and burning it contributes to climate change by

unlocking the carbon stored in the wood. It also creates significant indoor air pollution. The Hydraid® BioSand water filter is a safe and practical alternative. It uses centuries-old slow sand technology to remove waterborne pathogens with simple gravity. Our donation provides upfront funding for the installation of these water filters — reducing greenhouse gas pollution and bringing clean air and water to families across Kenya.

The AAR and SBL are continuing this sustainability program in 2013. We currently have a 4.72 percent combined participation rate, and we hope to improve on that as more members register in the coming months for the 2013 Annual Meeting. We encourage you to make this inexpensive commitment to helping make our meetings more environmentally friendly!

Thank you to all of our AAR contributors:
